ABOUT ME

Computer Science student with a passion for development and engineering, eager to start working, in order to gain experience and knowledge in the world of technology and computing.

PROJECTS

Hospital Network Thesis Project

- Developed a comprehensive hospital network system, including a website, an administration application for hospital management, and a monitoring-enabled network for connectivity and support.

Hospital Administration System Project

- A fully functional hospital administration system built using Java FXML and SQL for efficient management and data handling.

Cinema Site Project

- A simulated local cinema website featuring a curated selection of classic movies, built using HTML, PHP, and SQL.

Solar Panel Site Project

- Developed a static website with dynamic JavaScript elements.
